

Molly Young

I build the systems that make GTM work.

OVERVIEW

I found my career in tech because I wanted to become a developer. I already had a background in sales and marketing, and I brought that experience into GitLab as an early BDR. Teaching programming and learning to build shaped the way I approached the work, eventually bringing business and customer experience together with systems, data, automation, and AI across Revenue Operations, Marketing Operations, and GTM Engineering.

Today I build the operating foundations revenue teams need to execute: Salesforce architecture, lifecycle and ownership models, top-of-funnel systems, forecasting, deal desk, quote-to-cash, revenue intelligence, and the automation and AI that make those systems easier to run. My work ranges from aligning teams around definitions and process to shipping Python pipelines, governed agents, dashboards, and workflows through APIs and the command line.

I am especially effective when growth or complexity creates gaps in clarity, alignment, or visibility. I move between strategy and hands-on execution to align teams around shared definitions, improve how work moves across the GTM organization, and build the systems, automation, and reporting that make execution more consistent and decisions more trustworthy. That is how I practice Command Line GTM: using human judgment, connected workflows, code, automation, and AI to make the business work better.

EXPERIENCE

Lumana | Senior Manager, Revenue Operations

2026-present

Second Operations hire at an early-stage AI company; building across top-of-funnel architecture, GTM systems, revenue intelligence, deal desk, and quote-to-cash

- Built and deployed an AI-assisted Closed Won validation gate using Python, Salesforce, Slack, and Claude that checks direct and partner deals against 47-53 rules before fulfillment; cut mean approval time from about 2.6 days to under 1 day and raised same-day approvals from 60% to about 90% with no added seller steps.
- Built and am scaling a quality-first weekly prospecting engine spanning AI-tuned ICP and persona sourcing, waterfall enrichment, pickup-likelihood signals, Salesforce matching and territory assignment, and Outreach enrollment - replacing one-off list building with a repeatable, measurable motion.
- Engineered a config-driven Python and YAML event-import pipeline that cleans, deduplicates, matches, exclusion-checks, creates, routes, and sequences raw attendee lists; processed 10+ events with dry runs, review pauses, resumable steps, and auditable outputs.
- Built an automated weekly Executive GTM Summary from Salesforce to self-contained HTML, with record-level drilldowns, versioned definitions, archived snapshots, checksum-verified delivery, and integrity gates that stop partial or abnormal data pulls before publication.
- Co-developed the MVP Sales Knowledge Agent in Atlassian Rojo, grounding sourced answers in curated Confluence, Google Drive, and GitHub content while defining access, audience, regional, and connector-governance controls with Enablement and IT.
- Architected a Salesforce-first GTM data catalog, curated business-knowledge resource, and governed AI context layer so executive and RevOps questions can resolve to trusted definitions, fields, mappings, and guardrails.
- Deployed Salesforce metadata programmatically through the CLI, including custom fields, flows, Apex classes, and permission sets; documented API connections and system configuration across Chili Piper and DealHub.

Buildkite | Manager, Revenue Operations / RevOps + BDR Manager

2023-2026

First RevOps hire across Sales, Marketing, BDR, Partnerships, Technical Services, and Finance; reporting to the CRO

- Built the lead-to-opportunity operating framework across attribution, source tracking, contact processing, enrichment, routing, SLAs, rep alerts, and full-funnel reporting, driving a 6x improvement in speed to lead.
- Led a quote-to-cash transformation across pricing, product structure, CRM configuration, approval workflows, and quoting templates, reducing quote approval time by 50%.
- Implemented AI-enhanced MEDDPIC workflows using call, meeting, and email intelligence to surface deal risks and insights in CRM, reducing rep data entry by 70%.
- Defined revenue sources of truth across GTM and finance systems, aligning Salesforce and billing workflows to support revenue recognition, provisioning, invoicing, and consistent reporting.
- Managed the migration from HubSpot to Salesforce, including architecture, data model design, integrations, enrichment, and reporting rebuild.
- Served as a strategic partner across Sales, Marketing, Finance, and Legal, supporting QBRs, forecasting, board reporting, demand modeling, territory planning, and compensation planning.
- Owned GTM systems strategy and vendor relationships across CRM, marketing automation, enrichment, routing, prospecting, engagement, and analytics tools.
- Scaled and managed a team of BDRs and fractional GTM operations consultants supporting strategy, systems, and execution.

Remote | Growth Systems & Ops / Sales Business Partner / Sr. SDR Ops Manager

2021-2023

Second Sales Ops hire across Sales, BDR, Marketing, Finance, Product, and Partnerships during hyper-growth

- Owned global GTM processes, rules of engagement, and data governance across enrichment, lead processing, routing, SLAs, and handoffs, including regional data and email-consent compliance, enabling consistent inbound and outbound execution across segmented SDR teams.
- Supported accelerated sales-org growth, expanding SDR and AE teams by over 200% in a three-month period.
- Operationalized real-time website intent signals within SDR workflows, giving reps visibility into account activity, visitor location, and engagement patterns to drive faster, more relevant follow-up.
- Supported market sizing and coverage planning across TAM, SAM, and SOM, aligning territory design, demand modeling, quotas, and compensation to support growth and fairness at scale.
- Mentored SDR and operations team members, supporting growth into expanded Sales Ops and GTM roles.

Fastly | Marketing Operations Manager

2019-2021

Second Marketing Ops hire scaling operations through rapid growth, acquisitions, and IPO

- Designed multi-source enrichment waterfall automation to surface the most reliable data inputs, simplifying reporting, improving data quality, and enabling more effective territory and GTM planning.
- Owned the global lead-management ecosystem end to end, spanning inquiry intake, enrichment, routing, lifecycle management, attribution, and conversion across Salesforce, Marketo, enrichment tooling, and analytics layers.
- Supported a comprehensive email-deliverability remediation effort, restoring sending reputation from blacklist status through coordinated improvements to data hygiene, infrastructure, sending practices, messaging, and domain strategy.
- Led Eloqua-to-Marketo and HubSpot-to-Marketo and Salesforce migrations supporting global teams and acquisitions.
- Expanded the team from 2 to 19 across marketing operations, analytics, program management, demand, and enablement, while building intake, project-management, and capacity-planning processes.

Mattermost | Marketing Operations Manager

2018-2019

Second Marketing hire reporting to the VP of Marketing

- Implemented and optimized marketing automation, process, and systems including attribution modeling, routing improvements, and SLAs.
- Developed SDR onboarding and early GTM operational processes.

GitLab | BDR Manager / BDR Team Lead / BDR

2016-2018

Early employee contributing to foundational GTM processes

- Early BDR hire consistently generating more than \$1 million in qualified pipeline per quarter.
- Built and managed a global and remote BDR and SDR team, establishing processes, workflows, enablement, reporting, and automation from 0 to 1.
- Created onboarding and enablement programs decreasing ramp time by 30% and improving time to pipeline contribution.
- Defined the SMB sales motion including automation, processes, documentation, handoffs, and SLAs.

CORE STRENGTHS

gtm_engineering	AI agents and knowledge systems, Salesforce automation, config-driven pipelines, signal orchestration, workflow automation, dashboards as code
revenue_operations	forecasting, deal desk, quote-to-cash, lead-to-revenue architecture, scoring, routing, attribution, lifecycle design, ROE, data governance
revenue_intelligence	executive GTM reporting, versioned metric definitions, pipeline and forecast analysis, integrity controls, source-of-truth reporting
operating_leadership	team, vendor, and contractor leadership; onboarding and enablement; sprint cadences; cross-functional alignment; executive partnership

STACK

ai	Claude, Claude Code, OpenAI Codex, ChatGPT, Gemini, Atlassian Rovo, MCP servers, prompt engineering
runtime	Python, Bash, SQL, SOQL, HTML, CSS, JavaScript, YAML, JSON, Markdown, Git, launchd, cron
pipelines	Workato, Make, n8n, Zapier, REST APIs, webhooks, FoundryOps / g-gremlin, Salesforce CLI, HubSpot CLI, Metadata API, Bulk API
infra	Salesforce, HubSpot, NetSuite, DealHub, PandaDoc
data	ZoomInfo, LinkedIn Sales Navigator, Fullenrich, Cognism, Lusha, 6sense, Common Room, Warmly, Propensity, Apollo, GovSpend, Pursuit
orchestration	LeanData, Chili Piper, BookIt, Floqer, Outreach, Orum, Marketo, Eloqua, HeyReach, Instantly, Sendoso, Intercom, Qualified
observability	Gong, Avoma, Clari, Tableau, Looker
partner	Crossbeam, Tackle, Magentrix
collab	Slack, Jira, Linear, Confluence, Notion, Google Drive, GitHub

EDUCATION

Concordia University, St. Paul

B.A. Marketing Management & Creative Innovations
